

NP Series Fluid Processing and Transfer Sliding Vane Pumps

NP2 with Cartridge Mechanical Seal

NP2 with Steam Jackets

How Blackmer's sliding vane action works

Application Versatility

The NP type positive displacement sliding vane pumps are specially designed to offer maximum versatility for handling a wide range of clean, non-corrosive fluids.

Efficiency Means Energy Savings

The high volumetric efficiency and symmetrical bearing support of the NP pumps means they require less horsepower

than other PD pumps and up to 50% less power when handling viscous fluids. This means cost savings on both motors and electricity to operate the pumps.

Self-Priming and Dry Run Capability

The NP pumps are self-priming, and the self-adjusting vanes help maintain this capability. NP pumps can run dry for short periods of time for priming and line stripping.

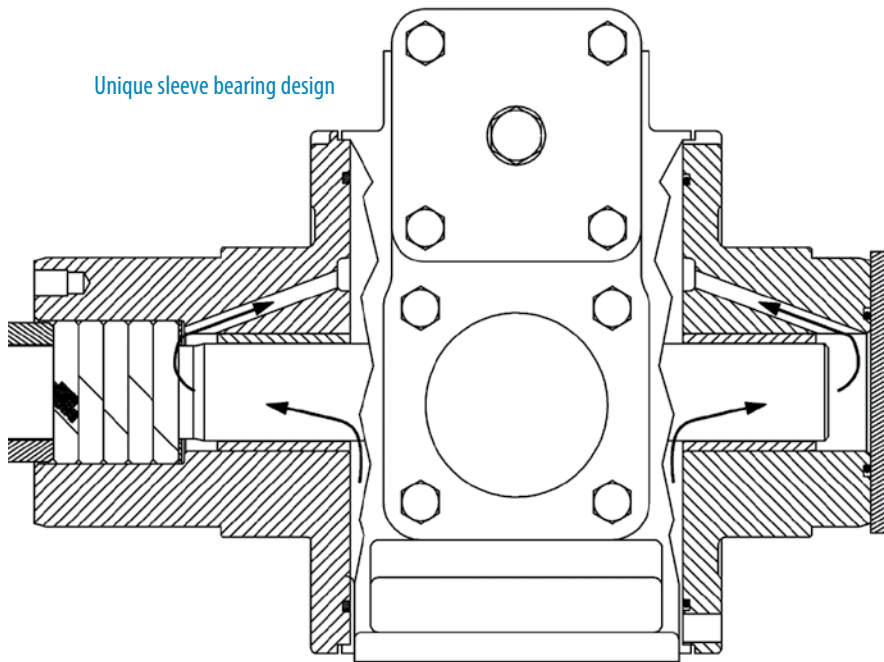

High Viscosity

The NP pumps are ideal for handling viscous or shear sensitive fluids. The key to the NP series' versatility is Blackmer's unique sliding vane rotor design that provides sustained, high level performance over a wide viscosity range. Slow operating speeds and non-pulsating flow minimizes shear and agitation of the fluid. Optional Heating Jackets are available if required.

NP Series

Multipurpose Sliding Vane Pumps for a wide range of fluids and viscosities

Long Bearing Life

The unique head and bearing design allows a small quantity of fluid to flow from the discharge side of the pump to the bearings. The pumpage is then drawn to the suction side of the pump through passages in the heads. The small, continuous flow of fluid over the bearing surfaces provides a hydrodynamic film, which minimizes temperature rise for longer bearing life.

Applications

- Refined Fuels
- Wax
- Greases
- Glues
- Solvents (VOC's)
- Adhesives
- Chocolate
- Creosote
- Syrup
- Asphalt
- Molasses
- Aqueous Film Forming Foam (AFFF)
- Edible Oils
- Black Liquor
- Sodium Silicate
- Tallow

Options and Specifications

Casing:

Cast iron construction

Drain Plugs:

Allow for easy draining, standard on ductile iron casing, optional on cast iron casing

Rotor & Shaft:

Ductile iron rotor with hardened steel shaft

Jacket Options:

Pumps available with optional Electric Heater ports or heating jackets for use with steam or hot oil. Both options heat the pump for highly viscous fluids and controlling bearing temperature. Electric heater ports are ready to accept standard heating elements. Steam and hot oil jackets use standard NPT connections.

Relief Valve:

Integral cast iron valve with steel spring (optional corrosion resistant relief valve with stainless steel spring)

Flanges: NP1.5" model:

NPT tapped casing ports

NP2, 2.5, 3 & 4" models:

NPT tapped companion flanges standard— optional weld neck, ANSI 150 lb. available

Elastomer:

FKM is standard. PTFE is optional.

Seals:

PTFE impregnated shaft packing is standard

Carbon filled PTFE lip seals, Blackmer triple lip seals, single or multiple cartridge mechanical seal options available.

Design Parameters

Flow Rates:

5 to 500 U.S. gpm
(19 to 1,893 L/min)

Operating Temperatures:

to 500°F (260°C)

Viscosity Range:

30-100,000 ssu
(1.0-22,000 cP)

Maximum Differential Pressure:

200 psi (13.8 bar)
300 psi (20.7 bar) hydrostatic pressure

Basic Design And Construction
